EXPERIENCE

Revature, Remote — *Associate Full Stack Developer*

August 2022 - September 2022

Completed a three layered architecture console based Maven application using Java and PostgreSQL. This application allows an end user to interact with the database where this user can, for example, list, update, create, and make changes to information.

BOOT CAMP PROJECT

PokeMart

Designed and developed an e-commerce web application in a 4-person team using JavaScript, MERN tech stack, and Stripe to process user payments. This progressive web application allows a user to register and make purchases. We used the JSON Web Token concept to validate browser access token, which then persisted in the localStorage. We also utilized IndexedDB to persist data being cached from MongoDB database in case the server gets interrupted so that the front end is still operational until normal connection to the server gets restored.

SKILLS

o HTML
o CSS
o JavaScript
o Java
o React
o MongoDB
o GraphQL
o RESTful API
o MySQL
o NodeJS
o Express
o GitHub
o Analytical thinking
o Multitasking
o Problem solving
o Communication
o Project management

.
